AB - A swept turbomachinery blade for use in a cascade of such blades
is disclosed. The blade (12) has an airfoil (22) uniquely swept so
that an endwall shock (64) of limited radial extent and a passage
shock (66) are coincident and a working medium (48) flowing
through interblade passages (50) is subjected to a single
coincident shock rather than the individual shocks. In one
embodiment of the invention the forwardmost extremity of the
airfoil defines an inner transition point (40) located at an inner
transition radius r_{t_inner} . The sweep angle of the airfoil is
nondecreasing with increasing radius from the inner transition
radius to an outer transition radius r_{t_outer} , radially inward of
the airfoil tip (26), and is nonincreasing with increasing radius
between the outer transition radius and the airfoil tip.
